

LLumin Version 23.11 Release Notes

Assets & Work Management

Various Updates

- We have received requests to better track safety related issues so we have add a core field to mark Work Orders as “Safety” Work Orders.
- We have added the Work Order’s Location to any related workflow notifications.
- We have added the Asset Manufacturer field to the Recurring Work Finder.

Materials Management

Item Master Screen Enhancements

- The primary change made to the Item Master Screen is to the layout. We listen..... and have been told that it takes too many “clicks” to find information or to execute an action in this part of the application.
- In response to customer feedback, our objective is to make data fields easy to find, and in most cases just one click away.
- Another driver behind this improvement is to align with previous screen updates on the Work Order Screen and Asset Screen. With consistency across the application, training will be minimized, and ease of use increased.

More detailed information can be found in the [Item Master User Guide](#) on the LLumin Support Portal.

Minor Improvements

- Improved various grids by making Item Nbr values clickable links to the respective Item records.

- Various performance and visual improvements.
