# LLumin Release Notes 24.5

Release Date: May 16, 2024

---

## New Features

- **Multi-Currency Support:**
  - Introducing the ability to manage multiple currencies seamlessly, catering to our international customers and simplifying global financial transactions. View Detailed Guide.
- **Selective Child Asset Management:**
  - Enhance your asset management capabilities by selectively moving child assets with a parent asset. This feature allows for greater flexibility and precision in asset organization. View Detailed Guide.
- **Optimized Work Order Type Management:**
  - Significant improvements to Work Order Type settings, focusing on pre-work and completion criteria along with a continuous feedback system for ongoing improvements. View Detailed Guide.
- **Serialized Item Sub-Statuses:**
  - New functionality for adding sub-statuses to serialized items, allowing for more detailed tracking and status management within the inventory system. View Detailed Guide.
- **Enhanced Work Request Communication:**
  - LLITE users can now maintain a running list of comments on a Work Request, improving communication with the technician handling the request. View Detailed Guide.
- **New Item Master Screen Update:**
  - The Item Master screen has been upgraded for all customers, featuring enhanced usability and inventory management features. View Detailed Guide.

## Improvements

- **Added**: The ability to prevent the deletion of an Asset Status or Asset Class that is currently in use, with a notification alerting the user if an attempt is made.

- **Added:** A setting in system configuration to automatically log out users after a period of inactivity.
- **Enhanced:** The "Show Open" button functionality in the Asset Map View. Now, it only displays open work orders for the layers currently selected by the user.

- **Added**: While in Map View, added a popup featuring a print and chart option to Inspection Results.

- **Added:** A function to prompt users immediately for a GL Account when required on new PO lines.

- **Added:** More intuitive and descriptive titles and explanations for user-configurable system settings.

- **Improved:** Various minor improvements have been implemented to enhance performance and visual aspects of the system.

## Bug Fixes

- **Fixed**: An issue that caused attached files not to be included when copying an asset.

- **Fixed**: An issue where checklist comments would need to be resized when content exceeded the original dimensions.

- **Fixed**: An issue that caused content to be duplicated when opening the Procedure Detail View more than once.

- **Fixed**: An issue that caused parent-child relationships to be lost when procedure steps were copied.

- **Fixed**: An issue that causes an error when creating Purchase requests back-to-back.

- **Updated**: The system to prevent unnecessary reservation pop-ups when the 'HidePendingReservations' setting is enabled.

- **Fixed**: An issue where users received an unsaved changes alert in error when exiting the PM Entry and Details screens.
