# LLumin Release Notes 24.6
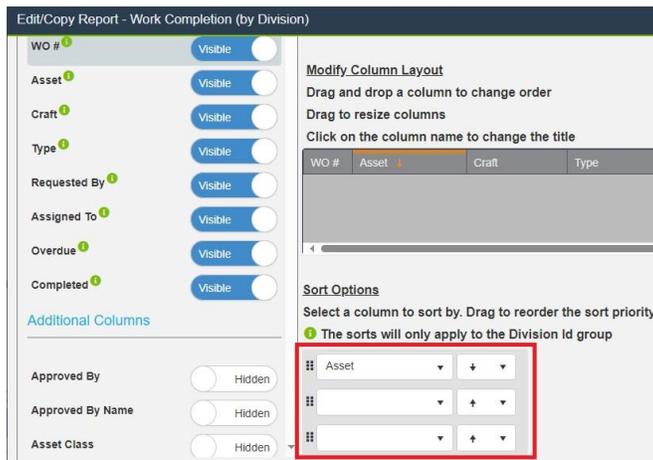

Release Date: June 20, 2024

Improvements

1. **Added:** You can now view open work orders for child assets on their parent assets on the GIS map, including overlays.

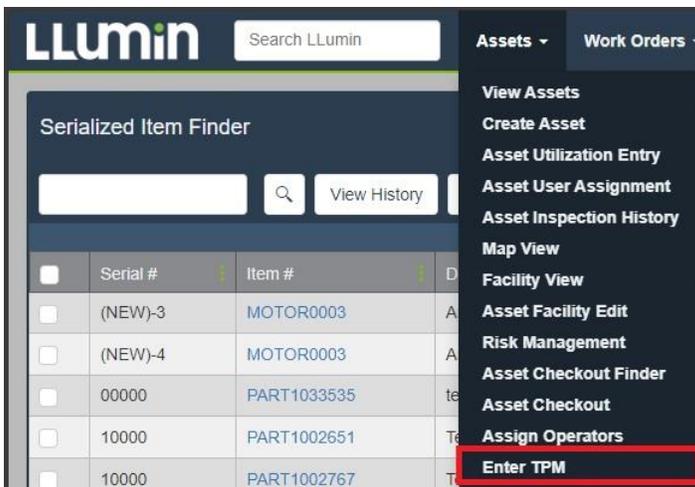

2. **Added:** New features have been added to LLumin's Vendor API. This includes CreateVendor and Patch endpoints to add and update vendor information. Use the endpoint /api/vendors for these operations.

3. **Improved:** Sorting now reflects report grouping, applying only to the lowest group level.
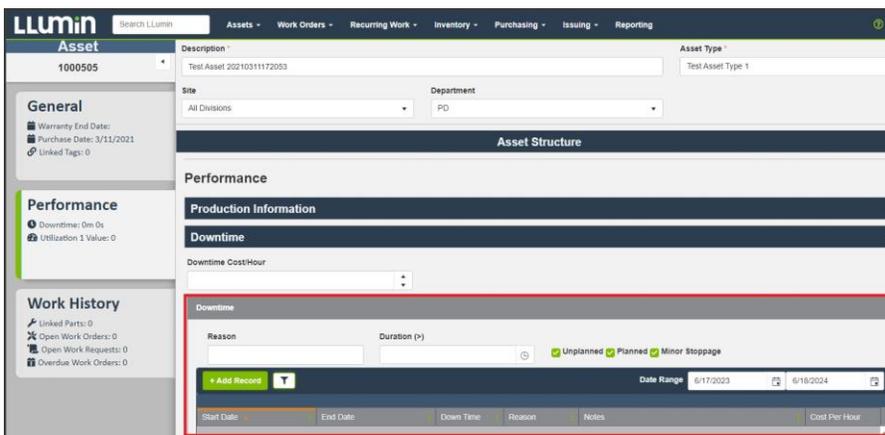

4. **Added:** The Stockroom address model now includes a "Country" field for better handling of non-US addresses.

5. **Relocated:** TPM items have been moved under the Asset menu, with added options for "View Work Definitions" and "Create Work Definitions."

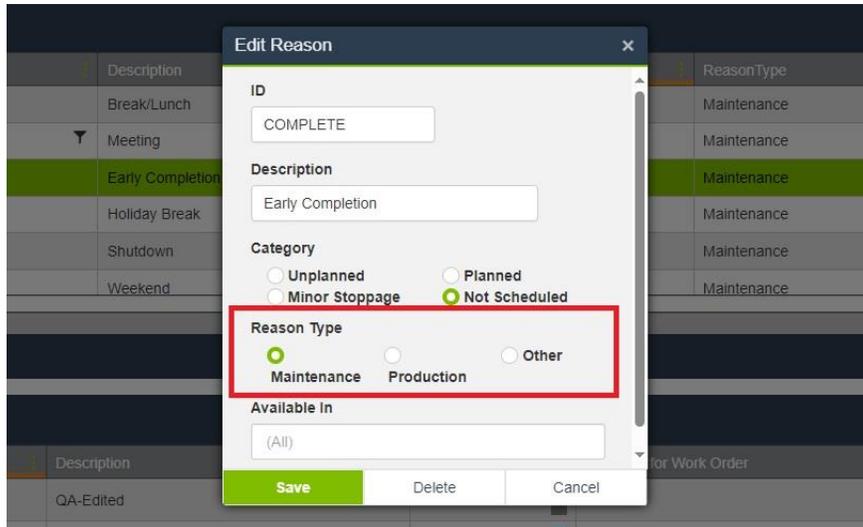

6. **Added:** The Downtime History grid now has filters for Date Range, Reasons, Category, and Duration.

7. **Enabled:** Dev Express reports can now read asset type level user-defined field captions.

8. **Added:** The Item Finder now includes the Vendor Barcode field as a filter option.

9. **Added:** You can now designate downtime reasons as Maintenance or Production for better reporting.

10. **Added:** Support for the Bulgarian language.

11. **Renamed:** The "Asset Maintenance" tab is now called "Work History."

Bug Fixes

1. **Fixed:** An issue where GIS data wouldn't display due to null entries or incorrect value conversions.

2. **Resolved:** Errors caused by entering locations longer than 10 characters in the "To Bin" field in Inventory Transfer.
3. **Fixed:** An issue where using "Receive All" on POs with manual serial numbers did not prompt for serial numbers.
4. **Fixed:** An issue where Excel exports would freeze due to apostrophes in field captions.

5. **Resolved:** An issue where utilization values wouldn't be saved in checklists for assets with dual utilization values.
