Procedure Checklist Steps: Save to Asset Field

We have adjusted the function of the "Save to Asset Field" field to use the decimal places and character limits from the fields they will save to within the Procedure's Checklist Steps.

Please see the example below:

The screenshot shows the 'Edit Checklist Step' form. The 'Step Description' field contains 'Condition of Asset'. The 'DataType' dropdown is set to 'Asset Condition'. The 'Required' checkbox is unchecked. The 'Save To Asset Field' dropdown is set to 'Condition'. The 'Default Value' dropdown is set to 'Good'.

Work Order Performance Improvements

Performance improvements have been for both approving and assigning Work Orders.'

READYTrak

Cycle Counts

We have made significant improvements to the overall performance of saving and opening In Progress or New Counts as well as opening the Cycle Preview screen.

Issues Addressed

Workflow Approvals

We have addressed an issue where workflows that required at least one approval were continuing to require approval following initial approval.

** Please note that we have also made various performance improvements across the application.
