

LLumin April 2020 Maintenance Release Notes

READYTrak

Minor improvements

- We have made improvements to allow DYMO printers to print labels when the Item doesn't have a location.
- We have improved the Purchase Requisition/Order approval process to remove pending approvals when the Requisition/Order is canceled.
- We have added the capability to make the Vendor ID a required field when creating Purchase Requests. This can be set at the User Role level.

READYAsset

Asset labels

- We have made improvements to allow the printing of Asset labels from the Asset Master for Zebra printers.

Minor improvements

- We have improved the duplicate functionality on Assets to validate the new Asset details against existing Assets to avoid using existing Asset IDs.
- We have adjusted the Work Order equipment time tracking to be attributed to the person using the equipment and not the person entering the time.

**Additional minor fixes and/or cosmetic updates have also been included in this release.

Modules

Workflow

- We have further improved the workflow module to address specific circumstances where the workflows did not trigger related to local time versus UTC time.

Project

- We have added improvements to the Project module to incorporate all Work Order costs to be reflected on a Project.

**Additional minor fixes and/or cosmetic updates have also been included in this release.
