Resolved Issues3

Improvements

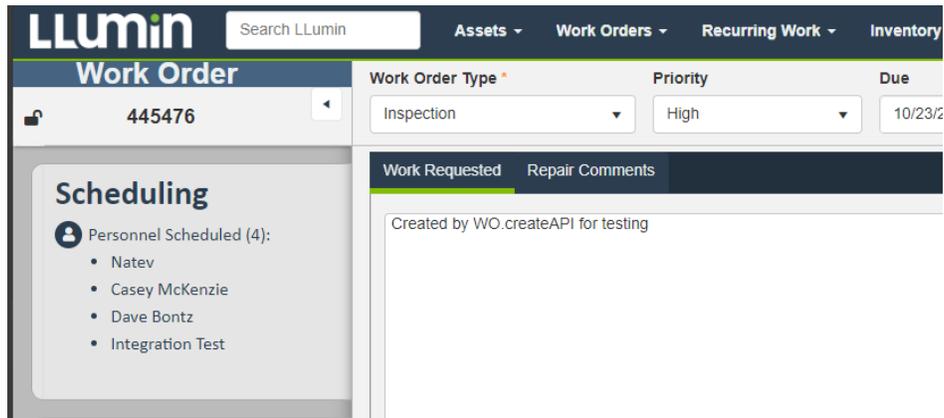

- When copying an asset, users are now prompted with options for handling the Partlink field when "copy parts" is checked. You can either leave it as is, create a new Partlink, or copy the parts from the original asset.

Include Parts Required ?

By default 1000538 will have its parts linked to the copied Asset. If Unlink Parts When Copying is checked then the parts will be copied but a link will not be kept between the Assets. Linking parts means that if 1000538 updates its parts then the copied Asset will reflect this update too.

Unlink Parts When Copying

- Improved GIS layer filtering by allowing users to clear the "Open Work Order/Down Filter" while keeping selected layers intact.
- Added a "Locked" checkbox in the Work Order header to prevent any further changes, including reopening or editing the work order once checked.

- When closing a work order as Close (Not Complete) from the Open Work Order Grid, users are now prompted to provide a reason.
- Comments on Close (Not Complete) work orders are now visible in work order reports.
- When multiple TPMs exist for an asset, the system now prompts users to select which TPM to apply.
- The Cycle Count grid now includes an item location column to help users quickly identify where items are stored.
- Added the "Date Last Counted" field to the Cycle Count screen.

Select items from the finder to add them to the cycle

- Reorganized the Cycle Count screen legend to match the actual display order of the color codes and clarified that the description appears at the end.
- Recaptioned the "+/-" column in the Cycle Count approval grid to "X→Y" and added a new "+/-" column to display the difference in quantities, making it easier to understand stock changes.
- Enhanced the quick search button tooltip in the Item Finder to include "Alternative Part 2" for improved search results.
- Closed (Not Complete) work orders are now excluded from the "Work Order Compliance Last Week" KPI.
- Recurring Work setup now triggers on weekdays only, with suppression adjusted for Sunday and Monday instead of Saturday and Sunday.

Resolved Issues

- Resolved various issues to improve overall system stability and performance. These updates are part of our ongoing commitment to enhancing your experience.
