

## LLumin Version 21.12 Release Notes

### *READYTrak*

#### Label printing

- We have added a system configuration to reconfigure the printed label formats to decrease the size of the barcode and increase the font size of the label fields (i.e. Item Number, Description, Location etc.).

### *REST API*

#### Endpoints

- We have expanded our list of supported REST API Endpoints
- For more information on the REST API Endpoints and which fields are involved, please reach out to the LLumin Support team at [support@llumin.zendesk.com](mailto:support@llumin.zendesk.com) or 413-233-5434.

### *Minor Changes*

- We have made minor changes to fields within the PO Summary reporting data source.
- We have added support for more international characters in our reporting functionality.
- We have deprecated the POs Waiting to be Approved Home Page grid.
- We have added functionality to return more verbose logging when printing test labels from within the Configuration Mode.
